Workpulse

PAROS Technologies

We Help Your CML become more efficient and profitable!

Ordering & Production Management System (OPMS)

Struggling to keep up with CML Production, Inventory and Order Management?

We have the solution.

The Workpulse Ordering and Production Management system powered by PAROS provides a platform for CMLs to manage the various stages in the manufacturing process and product life cycle efficiently.

Get complete visibility on production, order management, costing, wastage, and delivery with easy-to-use solution.

Why Choose Us?

➤ We have leveraged technology to help run CMLs smoothly and be profitable for over 15 years.

➤ Get a simple and easy to use interface that requires no training to use.

➤ We offer an integrated system to tackle your CML challenges and meet your production, recipe, inventory, distribution, and accounting needs.

➤ OPMS can easily be configured according to your brand standards and needs.

Accurate Costing

Accurate product costing is critical for the survival and success of your business.

Track your costs from the moment you receive the raw materials to the delivery of the finished products.

Order Management

Eliminate errors in orders completely by giving control to your stores to order online from any device, anytime.

Stores can auto generate Par level or forecast orders.

Manage credit requests online, be more efficient and save time.

Key Performance Metrics

Look at information the way you want.

All reports are built on a powerful reporting engine, giving you ad hoc capability.

Export key reports to csv or excel, pdf, print or email.

Smoother Management
Cost Analysis & Control

Run your production and manage inventory easily.

OPMS has been developed to allow you to remain focused on your primary responsibility – the production.

OPMS lets you quickly review production orders, raw material (ingredient) requirements, inventory levels, and provides you a production manifesto that is broken down in optimal batch sizes based on throughput rates/capacities of your various equipment.

Global Item Management

- Manage new, discontinued, seasonal products.
- CML, DCP and other vendor catalogs.
- Price changes.
- Marketing and new product introduction.

Recipe Management

- Maintain recipes and multi-level recipes.
- Cost or yield change in product affects all related products.
- For each production batch based on recipe for each product and various production processes products easily.
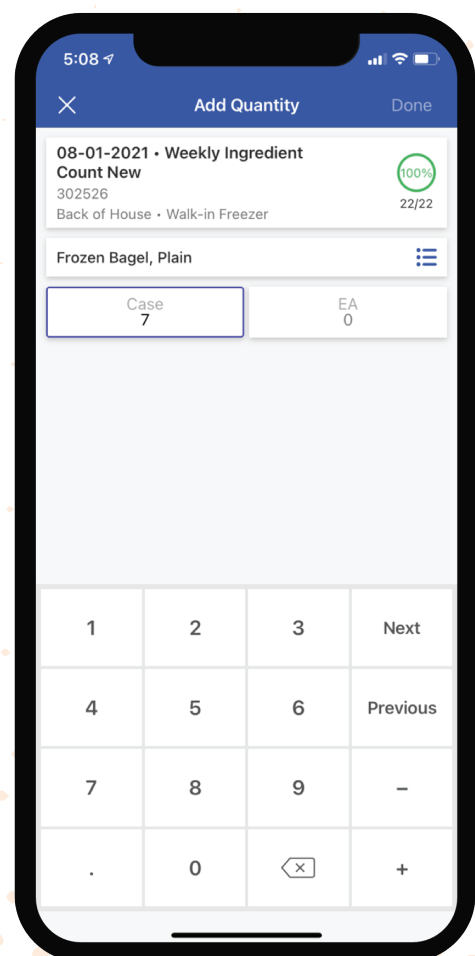

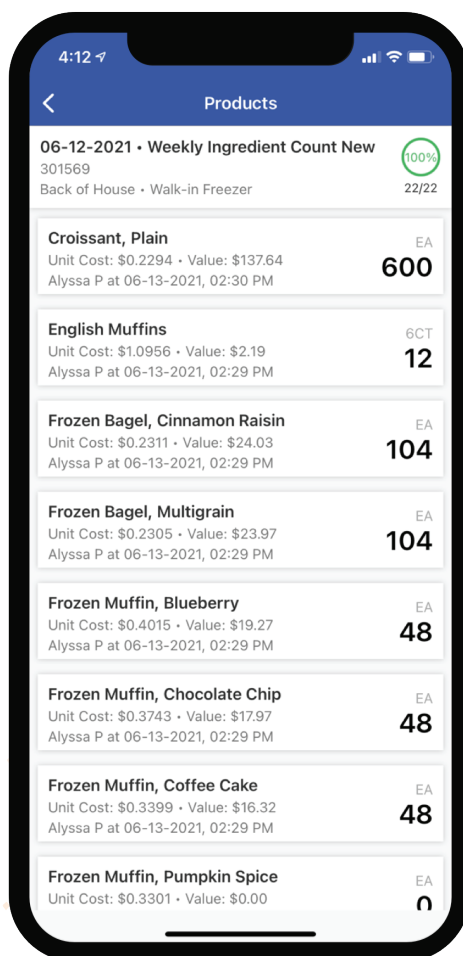

Production Management

- Production and finishing reports based on orders and routes/stops.
- Identify and setup minimums, maximums, rounding controls at the vendor levels.
- Set up waste factor to automatically adjust the production.
- Configure batch size for mixing to generate batch mixing reports.
- Record batch mixing temperatures and processing time.
- Manage production lists, add/substitute/delete products.

Inventory Management

- Eliminate manual entry errors and save time, perform full inventory counts using a tablet or phone.

- Real time ending inventory.

- Integration with DCP invoices.

- Compare ideal to actual food cost.

- Material requirement planning.

- Manage your Food and Yield Variance.

- Order Picking is more accurate and requires less rework and effort using our mobile app.

Agile Order Management Reduced Labor Costs

Easily manage your bakery/location ordering anywhere, anytime and on any device.

OPMS solution will take your CML and retail locations to higher level of profitability and efficiency.

OPMS automates and provides a simple easy to use interface, intuitive interface to help your managers place CML and in-store orders with great ease and control and less work than ever.

Sales Orders

- Auto ship products to introduce new products to stores.
- Generate invoices seamlessly.
- Accommodate and invoice pickup customers.

Forecasting

- Forecast orders days ahead for better planning with usage history.
- Exclude a day from forecast.
- View usage history and items with zero waste on a forecasted order.
- Reports to help reduce wastage and meet merchandising standards.
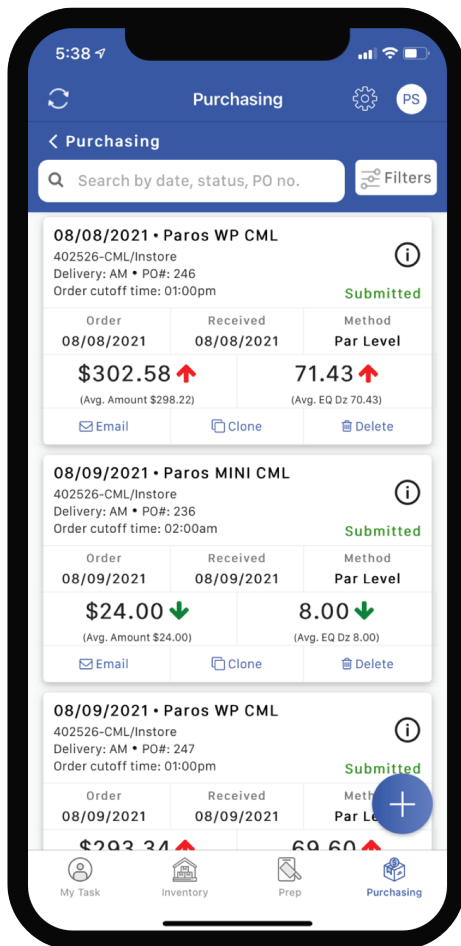

Online Ordering and Credit Resolution

- Auto generate orders to help with forecasting.
- User friendly ordering screen to easily place/review/edit orders before cutoff time.
- Easily place special orders for one off order and exclude it from forecast.
- Easy to use online credit resolution.
- Exclude location specified blackout dates.
- Manage your in-store bakery prep and waste easily.
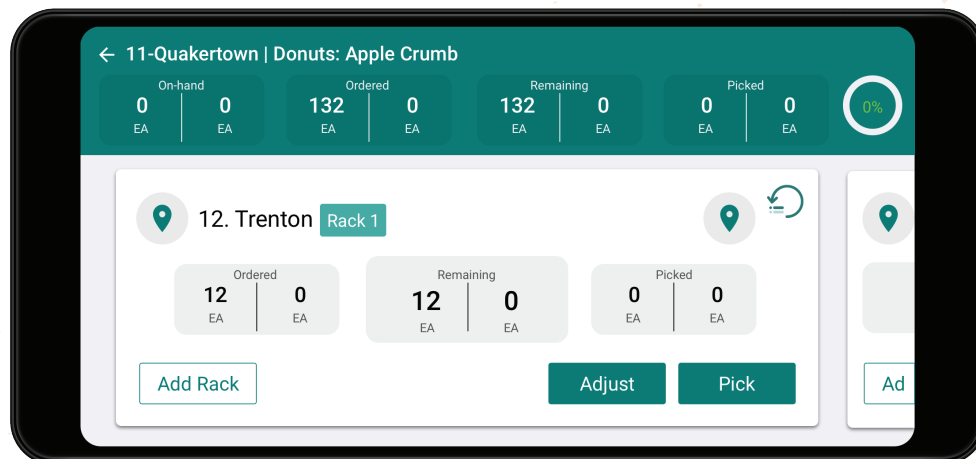

Analytics and Reporting

- Enterprise level reporting for production, finishing, packing and invoicing.
- Setup email profiles to have weekly reports emailed automatically on a weekly close.
- Menu analysis to help with costing and pricing of current and new products.
- Manage your food and yield variance with inventory insights.
- Enter weekly payroll and monthly fixed expense to generate weekly CPD (Cost Per Dozen).
- Flash profit and loss on monthly/weekly basis.

Ordering

Keep your stores happy and provide convenient ordering with an easy-to-use solution to review/edit orders, enter waste and request credit.

Order Picking

Optimize order picking process and manage all deliveries efficiently. Our solution ensures higher pick rates, fewer errors and far less order Picking re-work.

Broadcast Information

Prioritize Communication

Broadcast brand information and updates in real time

Our News and Broadcast solution provides a simple, fast, and effective way to communicate all updates to the employees directly. With Workpulse Knowledge, you can build, customize and update all training content as per your brand standards.

You can prioritize information and ensure critical news gets read by all as soon as they log in. You can also customize the notifications to disappear once it has been viewed. This helps to keep only relevant notifications for the user.

Communication

- Create and schedule communication directly to all the users in the organization
- Create rich snippets with links, images or attachments for easy viewing
- Customize the delivery of information by selecting employees by title
- Categorize the content for allowing users to browse the information later

Prioritization

- Ensure all critical messages get viewed by making it mandatory for users to view the information before proceeding further
- Enable disappearing notifications to reduce clutter and ensure only relevant information is available to the users
